Healthcare Smartroom

Improve the experience for patients and healthcare staff alike with Smartroom Healthcare, a multi-screen TV system designed to enhance engagement among patients and streamline workflows for staff.

Simplify screen management across your healthcare facility with an integrated system, making entertainment, information, and communication services easily accessible to both patients and staff. Improve patient engagement, education, and entertainment through interactive TV, bedside solutions, and mobile devices, while enhancing information dissemination and guidance with digital signage in public areas. Boost clinic efficiency by providing healthcare professionals with digital tools, enabling them to concentrate on delivering high-quality patient care.

Healthcare Smartroom

Entertain, educate & Engage patients

With interactive patient TV, mobile devices and other patient-facing bedside solutions you can provide services and content that entertain, educate and engage.

Patient Entertainment

Offer patients a relaxing experience with familiar entertainment options, including TV channels, streaming apps, video on demand, radio, games, and social media, accessible on multiple screens.

Patient Education

Improving patient engagement enhances health outcomes, speeds up recovery, reduces rehospitalization, and lowers costs. Offer treatment videos, condition info, messaging, reminders, and more to increase engagement.

Patient Communication

Digital solutions revolutionize communication, facilitating virtual doctor appointments, video calls with loved ones, and service requests via TV or mobile, all enhancing doctor-patient communication and the patient experience.

Inform and guide with digital signage

Utilizing Smartroom Smart Signage enables the placement of diverse displays, including digital signage screens, digital door displays, interactive self-service kiosks, and touch screen portals in public areas. This enhances the provision of information, guidance, and supplementary services to patients and visitors.

Hospital Wayfinding

Our 24/7 signage screens guide patients upon entry, providing floor plans, room numbers, and queue details. Integrated with self-service kiosks, they streamline patient check-in.

Digital door displays

Digital door displays extend your wayfinding solution, serving as occupancy, touch-screen, resource allocation, or general information screens. Their dynamic nature simplifies management and accommodates multiple use-cases.

Hospital Signage

Public digital signage screens provide tailored entertainment, information, and ads for patients and visitors, including hospital info, news, live TV, cafeteria menus, services, and parking details, customizable for each unit, ward, or hospital.

Make Your Clinical Workflow Faster

With the right digital tools your healthcare professionals can focus on what they do best: providing quality patient care. Our clinical workflow solutions free up resources from otherwise time-consuming tasks.

Patient Requests

Patients have the convenience of making service requests directly through their in-room TV or mobile devices. For instance, nurse calls can be routed directly to staff mobile devices, alerting the nearest personnel or the on-call nurse.

Room & Staff Allocation

Ditch traditional door signs! Our digital displays dynamically allocate rooms and staff by showing meeting schedules, staff names, titles, and real-time room purposes updated from your calendar and staff allocation apps.

Queue Management

Improve efficiency with a digital self-service screen system, integrating check-in kiosks from our partners, digital signage, and hospital wayfinding. This allows your staff to focus on patient care.
